## Data Sheet

### R-Series V RM5 Analog

#### Magnetostrictive Linear Position Sensors

- Super shield housing with IP68/IP69 against ingress of dust and water
- Direct analog output, position + speed
- Dual magnet position measurement

**V**  
THE NEW GENERATION

## MEASURING TECHNOLOGY

The absolute, linear position sensors provided by Tempsonics rely on the company's proprietary magnetostrictive technology, which can determine position with a high level of precision and robustness. Each Tempsonics® position sensor consists of a ferromagnetic waveguide, a position magnet, a strain pulse converter and a supporting electronics. The magnet, connected to the object in motion in the application, generates a magnetic field at its location on the waveguide. A short current pulse is applied to the waveguide. This creates a momentary radial magnetic field and torsional strain on the waveguide. The momentary interaction of the magnetic fields releases a torsional strain pulse that propagates the length of the waveguide. When the ultrasonic wave reaches the beginning of the waveguide it is converted into an electrical signal. Since the speed of the ultrasonic wave in the waveguide is precisely known, the time required to receive the return signal can be converted into a linear position measurement with both high accuracy and repeatability.

## R-SERIES V RM5 Analog

The Tempsonics® R-Series V brings very powerful sensor performance to meet the many demands of your application. The RM5 sensor is the version of the RH5 rod sensor in a protective housing (super shield housing). The main advantages of the RM5 are:

### Protection against corrosion

The housing made of high-quality stainless steel offers very good corrosion resistance. Thus, you can use the R-Series V also in aggressive environments.

### Protection against ingress of dust

The housing protects the internal sensor against penetration of dust. This maintains the sensor's performance even in heavy dust.

### Protection against ingress of water

The housing protects the internal sensor when submerged. This allows you to use the R-Series V even under water.

### Easy and fast replacement

If necessary, the sensor inside the housing can be replaced easily and fast. This saves time and downtime costs.

Fig. 1: Time-of-flight based magnetostrictive position sensing principle

In addition the R-Series V Analog scores with the following features:

### 2 positions simultaneously

The R-Series V Analog can detect and report the position of up to 2 magnets simultaneously.

### R-Series V Analog

With the R-Series V Analog you can configure the analog output (current/voltage) that it fits best for your application and also adjust it on site with the sensor assistant.

**All settings under control with the sensor assistant for the R-Series V**  
The TempoLink® smart assistant supports you in setup and diagnostics of the R-Series V. For more information of the assistant please see the data sheet:

- TempoLink® smart assistant

## TECHNICAL DATA

Output							
Analog	Voltage: 0...10/10...0/-10...+10/+10...-10 VDC (min. controller load > 5 kΩ) Current: 4(0)...20/20...4(0) mA (min./max. load 0/500 Ω)						
Measured output variables	Position for one or two position magnets Position + speed (without direction) or velocity (with direction) for one position magnet Position for one position magnet + temperature inside the sensor electronics housing						
Measurement parameters							
Position measurement							
Null/Span adjustment	100 % of electrical stroke						
Resolution	16 bit (internal resolution 0.1 μm)						
Update time	Stroke length	≤ 200 mm	≤ 350 mm	≤ 1200 mm	≤ 2400 mm	≤ 4800 mm	≤ 7615 mm
	Update time	0.25 ms	0.333 ms	0.5 ms	1.0 ms	2.0 ms	5.0 ms
Linearity deviation <sup>1</sup>	< ±0.01 % F.S. (minimum ±50 μm)						
Repeatability	< ±0.001 % F.S. (minimum ±1 μm)						
Hysteresis	< 4 μm typical						
Temperature coefficient	< 30 ppm/K typical						
Velocity measurement							
Range	0.01...10 m/s or 1...400 in./s						
Deviation	≤ 0.05 %						
Resolution	16 bit (minimum 0.01 mm/s)						
Operating conditions							
Operating temperature	-40...+85 °C (-40...+185 °F)						
Humidity	100 % relative humidity, no condensation						
Ingress protection	IP68 (3 m/180 d)/IP69						
Shock test	100 g/6 ms, IEC standard 60068-2-27						
Vibration test	10 g/10...2000 Hz, IEC 60068-2-6 (excluding resonant frequencies)						
EMC test	Electromagnetic emission according to EN 61000-6-3 Electromagnetic immunity according to EN 61000-6-2 The RM5 sensors fulfill the requirements of the EMC directives 2014/30/EU, UKSI 2016 No. 1091 and TR CU 020/2011						
Operating pressure	350 bar (5076 psi)/700 bar (10,153 psi) peak (at 10 × 1 min) for sensor rod						
Magnet movement velocity	Any						
Design/Material							
Sensor electronics housing	Stainless steel 1.4404 (AISI 316L)						
Sensor flange	Stainless steel 1.4404 (AISI 316L)						
Sensor rod	Stainless steel 1.4404 (AISI 316L)						
RoHS compliance	The used materials are compliant with the requirements of EU Directive 2011/65/EU and EU Regulation 2015/863 as well as UKSI 2022 No. 622						
Stroke length	25...7615 mm (1...299.8 in.)						
Mechanical mounting							
Mounting position	Any						
Mounting instruction	Please consult the technical drawings and the operation manual (document number: <a href="#">552063</a> )						
Electrical connection							
Connection type	Cable outlet						
Operating voltage	+12...30 VDC ±20 % (9.6...36 VDC)						
Power consumption	< 3.25 W						
Dielectric strength	500 VDC (DC ground to machine ground)						
Polarity protection	Up to -36 VDC						
Overvoltage protection	Up to 36 VDC						

1/ With position magnet # 251 416-2

TECHNICAL DRAWING

Fig. 2: Temposonics® RM5 with ring magnet

STRUCTURE

The RM5 Analog consists of (Fig. 3)

- 1 Super shield housing
- 2 R-Series V sensor with connector outlet (connection type D34)
- 3 Cable for direct connection to the controller (connection type HXX/RXX/TXX)

Fig. 3: Structure of RM5 Analog

CONNECTOR WIRING

HXX/RXX/TXX			
Signal + power supply			
Cable	Output	Color	Function
	1	GY	Position (magnet 1)
		PK	Signal Ground
	2*	YE	Position (magnet 2) or reverse position (magnet 1) or speed or velocity (magnet 1) or temperature inside the sensor electronics housing
		GN	Signal Ground
		BN	+12...30 VDC (±20 %)
		WH	DC Ground (0 V)
			* order dependent
For cable type TXX, the extra red & blue wires are not used.

0	Standard
3	Over range output mode

k	Output range
0	0...10 VDC or 4...20 mA
1	10...0 VDC or 20...4 mA
2	-10...+10 VDC or 0...20 mA
3	+10...-10 VDC or 20...0 mA
V	0...10 VDC for position, -10...+10 VDC for velocity

I	Max. speed or velocity value
(optional: use when I “Function” is 2 or 3)	
<div><div></div><div></div><div></div></div>	For metric stroke lengths encode speed or velocity in m/s for the values 0.01 to 9.99 m/s (001...999) For US customary stroke lengths encode speed or velocity in inches/s for the values 1 to 400 in./s (001...400)
To get a speed or velocity output of 0.025 m/s or 10 m/s for the R-Series V Analog, enter code (00E) for 0.025 m/s or (A00) for 10.0 m/s in the order code.	

NOTICE

- Specify the number of magnets for your application and order the magnets separately.
- The number of magnets is limited by the stroke length.  
The minimum allowed distance between magnets (i.e. front face of one to the front face of the next one) is 75 mm (3 in.).
- Use magnets of the same type for differential/multi-position measurement.

DELIVERY

- Sensor
- O-ring

Accessories have to be ordered separately.

Manuals, Software & 3D Models available at:  
[www.temposonics.com](http://www.temposonics.com)

## GLOSSARY

<b>A</b>
<b>Analog output</b> For a sensor with analog output, the measured value is output as an analog voltage signal or current signal.
<b>D</b>
<b>Differential</b> For differential measurement, the distance between the two position magnets is output as a value. (→ multi-position measurement)
<b>M</b>
<b>Max. speed or velocity value</b> For speed or velocity, the output value generated is scaled based on the maximum speed or velocity value indicated in the order code.
<b>Measuring direction</b> <ul style="list-style-type: none"> <li>• Forward: Values increasing from sensor electronics housing to rod end/profile end</li> <li>• Reverse: Values decreasing from sensor electronics housing to rod end/profile end</li> </ul>
<b>Multi-position measurement</b> During the measurement cycle, the positions of every magnet on the sensor are simultaneously reported. The velocity or speed is continuously calculated based on these changing position values as the magnets are moved.
<b>O</b>
<b>Over range output mode</b> When enabled this mode allows the position output values to continue to increase or decrease when the magnet travels beyond the active stroke range.
<b>R</b>
<b>Resolution</b> The sensor precisely measures time to provide the position measurement. For the analog output the measured time value is converted into an analog voltage signal or current signal using a high-performance Digital to Analog Converter (DAC) having 16 bits of resolution.
<b>S</b>
<b>Speed</b> The output value for speed indicates how fast the position magnet is being moved, independent of the measuring direction. (→ Velocity)
<b>T</b>
<b>Temperature inside the sensor electronics housing</b> The temperature inside the sensor electronics housing is reported as an analog voltage signal or current signal. For each output range, the 0 % output value has the factory default setpoint at -40 °C, and the 100 % output value has the default setpoint at +100 °C. Note: A dedicated temperature chip is used for the output signal and its values may vary from those reported on the TempoLink® application screen.
<b>V</b>
<b>Velocity</b> The output value for velocity indicates how fast the position magnet is being moved, and in which direction. (→ Speed)
